

Time Saving Tips!

- ◆ Know the directions ahead of time. Read them, memorize them, love them!! Don't waste your time on the test, reading and rereading the directions, you should already know and understand them!!
- ◆ When you are working on a problem, you are focused on it. Do not even glance around at other problems or the room, stay locked in on your problem.
- ◆ If you start a problem and get stuck, immediately circle it and come back later. Don't sit there thinking for 10 minutes, give yourself a break by moving on.
- ◆ If you start a problem you also must know that you have to put an answer down!! You should be able to eliminate at least one wrong answer, so you have to guess!!
- ◆ Above all, accuracy is key!! NEVER EVER give up accuracy for speed. The tortoise wins the race, it doesn't matter if you finish every question if they're all wrong!!
- ◆ Do the section in three phases.
 - First answer all the questions you know you can answer quickly
 - Second answer the questions you can answer with a little more time
 - Finally answer the questions that will take more time or that you aren't sure how to begin on
- ◆ Last minute and counting!!
 - Spend 10-15 seconds on each question and make SMART GUESSES!
